

Imagine strolling down to your dock, and walking on your beautiful, secure aluminum gangway without worry about slipping or having to watch your every step along the way! That is what the owners of EZ Dock Gangways do every time they walk out to their dock!

Constructed of 6061 aluminum trusses and frames, with a smooth yet tough walking surface made of ThruFlo decking and a secure handrail placed at a convenient height with mid rails, to protect children from falling through; EZ Dock's aluminum gangways are an excellent aesthetic feature to add to your waterfront. With a EZ Dock gangway system, you'll find yourself and your family spending even more time on the dock, because access is secure, smooth and safe!

Our parent company, Knight EZ Dock, has created two distinct product lines for gangways:

- 1) a Residential Gangway product line to suit most waterfront homeowner needs; and
- 2) a line of Commercial Gangways most suitable for public needs, complete with engineering wet stamp.

Both product lines are compatible with the EZ Dock system and are compatible with other types of dock systems. Fabricated by certified welders at our climate controlled welding shop and storage facility yard in Deer Park, Washington, gangways can be specially fabricated for your individual needs, including options for wheelchairs and limited access needs.

Knight EZ Dock also manufactures a line of tough galvanized steel hinges and roller systems for adapting the gangways to suit virtually any application!
